## PROJECT

---

Please note that some of my website is hosted on Heroku, so it can take pretty long to wait until the website completely load

- Netflix clone  
Using Reactjs requesting API from tmdb, movie-trailer to build a Netflix clone, which will show many specific movie sections, and searching for movie trailer, add movie to my list, search movie by name (note: because I still working on the loading page so there will be a full green page for 1s before seeing the website)
  - Demo
  - [Code](#)
- Shoe selling website  
Using Firebase as a database to store all product and using Reactjs to create a commercial website base on that database with many functions like filter product, add to cart etc.
  - [Demo](#)
  - [Code](#)
- Weather App  
Requesting API from weatherapi and using Reactjs to create a weather app, which can show the current and 3 days forecast in specific location
  - [Demo](#)
  - [Code](#)
